

*High contrast optics to more easily locate wildlife in a woodland setting.*

## PREDATOR® C5

The Steiner Predator binocular was developed as a special tool for hunters and nature observers to more easily spot animals in a woodland setting. Developed about 10 years ago, the concept is simple – boost the transmission of red and brown shades (the “right” side of the color spectrum towards infrared) while slightly reducing transmission of the “left” side of the spectrum (blue, green and UV light) to make animals and other objects “pop out” of the background.

For 2007, Steiner has developed an entirely new Predator binocular for the American hunter and outdoor enthusiast using entirely new optical system formulations, new fully multi-coated optics, and a completely new shock and waterproof housing. The new Predator C5 in 10x42 and 12x42 deliver a new standard of performance in a hunting binocular that includes a much higher degree of light transmission, image resolution, and color contrast than previously available.

The Predator C5 uses an all-new rigid chassis that is not only durable but also mil.spec waterproof and dry-nitrogen pressurized. You'll appreciate the aggressive styling of the focus wheel making the C5 easy to use and focus with gloves on in any weather.

Each Predator C5 includes a padded travel case, rain guard for the oculars and attached objective lens caps, along with a contoured neck strap. Optional harness systems are also available. Each binocular is threaded with a tripod mount for fit to the optional tripod adapter.

### 10x42 PREDATOR® C5

The 10x42 Predator® C5 has new mirror technology that combines silver mirror coatings with selected dielectric coating applications to the C5's roof prism phase-corrected optics. This new technology delivers greater light transmission, image contrast and better pinpoint resolution than ever before.

Item no. 250	10x42 Predator C5
Weight: 26.4 oz	Eye Relief: 17.4mm
Field of view: 315ft @ 1000 yds	30 year warranty

### 12x42 PREDATOR® C5

The New 12x42 Predator® C5 features a unique ergonomically designed housing and a special rubberized armor covering that feels great in the hand and helps protect the binocular from the harshest hunting conditions. The “pistol-grip” rubber surface gives them a secure comfortable grip, even when wet. For the first time, the Predator gets a twist-up eye cup system while offering an extensive eye relief.

Item no. 252	12x42 Predator C5
Weight: 27.1 oz	Eye Relief: 16.4mm
Field of view: 276ft @ 1000 yds	30 year warranty
